

# WISDOMTREE U.S. VALUE FUND: HIGH VALUE BUYBACKS

Kara Marciscano – Associate, Research  
02/22/2022

[Buybacks](#) are a viral topic because they reached near peak levels in 2021. Many argue that these repurchases were done at the market’s peak, implying that companies bought back their own shares at overvalued multiples—an inefficient use of capital that is likely to earn a poor return on investment for their shareholders.

It’s true that buybacks were historically elevated in 2021. And it may be true that some companies could have better allocated capital into less expensive investments, but it’s certainly not true for all.

Not all buybacks are created equal. In fact, our analysis of repurchases within the [Russell 1000 Index](#) indicates that most net repurchases were executed by companies categorized with the highest [shareholder yield](#)—in other words, by companies that are repurchasing shares at more attractive levels relative to their [market capitalizations](#).

Ideally, share repurchase programs are opportunistic and antidilutive, meaning that buybacks are done at discounted [valuations](#) and result in a significant reduction to the number of shares outstanding. In this scenario, buybacks have the potential to create value for shareholders by increasing their share in a company that, ideally, increases in value over time.

The [WisdomTree U.S. Value Fund \(WTV\)](#) aims to identify companies that fit within these preferred buyback guardrails and that are also exhibiting superior [quality](#) metrics.

[WTV](#) ranks and selects companies based on a composite score of their shareholder yield and quality metrics. In this dual framework, shareholder yield identifies companies that are repurchasing stock at attractive levels relative to their market capitalization, while the quality component identifies companies with higher relative efficiency, profitability and cash flow.

[WTV](#) held 146 stocks as of its most [recent rebalance](#), capturing 70% of the buybacks executed by the 800 largest U.S. stocks in the trailing 12 months.

Importantly, the average shareholder (6.6%) and earnings (7.5%) yields of [WTV](#) constituents are significantly higher than those of the non-[WTV](#) constituents (1.5% and 3.7%). In short, this indicates that the companies in [WTV](#) are buying back their shares at more attractive relative valuations than those that do not make the cut into the basket.

The companies in [WTV](#) are also meaningfully reducing their share counts. On average, companies in [WTV](#) reduced their shares outstanding by 2.8% in the trailing 12 months while the remainder of the 800 large-cap U.S. stock universe increased share counts by 1.1% on average, which dilutes shareholder ownership.

As discussed, quality is an equally important ingredient to the [WTV](#) recipe. The strategy targets companies that are generating more profit and cash flow per dollar invested in the business, which is why [WTV](#)'s return on equity and assets are at the higher end relative to benchmarks for broad and value-focused U.S. equities.

One valid concern with buybacks is whether they are financed with debt or equity. An added benefit to [WTV](#)'s quality screen is that the constituents of the Fund have lower debt-to-asset ratios than the broader benchmarks.

	Return on Equity	Return on Assets	Debt-to-Assets	Price-to-Earnings	Dividend Yield	Net Buyback Yield	Shareholder Yield
WisdomTree U.S. Value Fund	20.5%	3.3%	18.6%	12.6x	1.7%	5.6%	7.3%
S&P 500 Index	18.2%	4.0%	22.5%	26.1x	1.2%	1.3%	2.6%
Russell 1000 Index	17.3%	3.8%	22.8%	26.8x	1.2%	1.2%	2.4%
Russell 1000 Value Index	13.4%	2.7%	21.1%	19.8x	1.8%	1.1%	2.9%

## DEFINITIONS

**Buyback**: When a company uses its own cash to purchase its own outstanding shares; may positively impact the share price.

**Russell 1000 Index**: A measure of the performance of the 1,000 largest companies by market capitalization in the Russell 3000 Index.

**Shareholder Yield**: A data point that references the combination of dividend yield and buyback yield.

**Market Capitalization**: Market cap = share prices x number of shares outstanding. Firms with the highest values receive the highest weights in approaches designed to weight firms by market cap.

**Valuation**: Refers to metrics that relate financial statistics for equities to their price levels to determine if certain attributes, such as earnings or dividends, are cheap or expensive.

**Quality**: Characterized by higher efficiency and profitability. Typical measures include earnings, return on equity, return on assets, operating profitability as well as others. This term is also related to the Quality Factor, which associates these stock characteristics with excess returns vs the market over time.

**Volatility**: A measure of the dispersion of actual returns around a particular average level.
