
REVIEWING OUR EXPOSURE TO SMALL AND MID-CAP REGIONAL BANKS

Brian Manby – Associate, Investment Strategy
03/22/2024

Though U.S. equity markets are at all-time highs, regional banks remain mired in the fallout from last year's crisis that felled several companies in dramatic fashion.

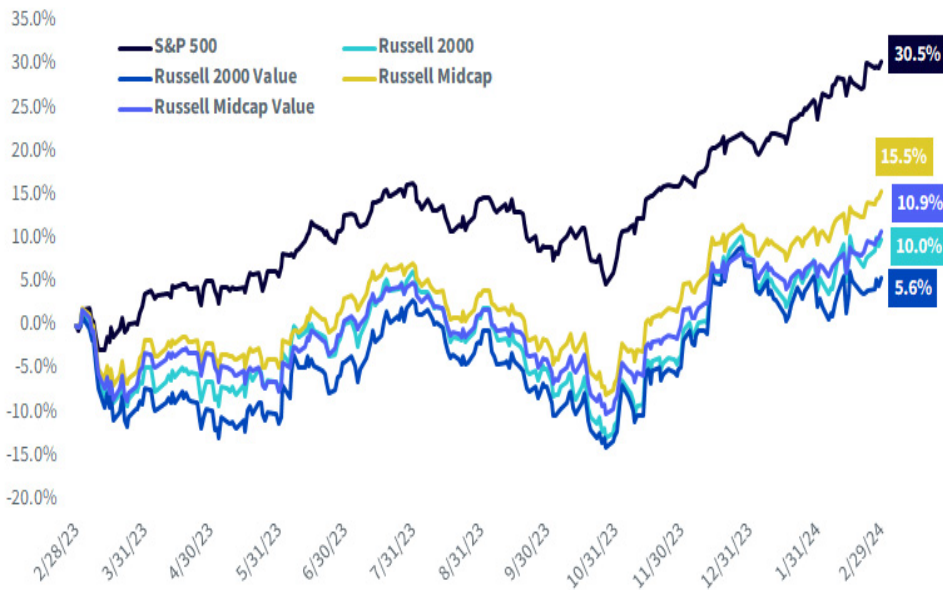

Silicon Valley Bank's failure in March 2023 stoked panic selling across the sector amid fears of contagion and prompted scrutiny of other banks' liquidity positions and asset-liability profiles.

Today, commercial real estate exposures are the preeminent concern, and markets remain deeply unsettled. The latest irritant contaminating sentiment is New York Community Bank, which needed a \$1 billion capital injection from a consortium of outside investors to keep it afloat. It installed a new CEO and created several new board seats for the investor group as a result. Its shares are on life support after falling 67%¹ to start the year.

The [KBW Regional Banking Index](#) and [S&P Regional Banks Select Industry Index](#) have each fallen by about 15% since the onset of the crisis last March.¹ Meanwhile, the [S&P 500](#) is up 30%, demonstrating the severity of markets' concerns about the health of the regional banking system.

Poor sentiment remains a headwind for [small](#) and [mid-cap](#) equity indexes, which have notable allocations to regional banks, despite broader equity market strength. The [Russell 2000](#) and [2000 Value Indexes](#) (up 10% and 5.6%, respectively) are still lagging [large caps](#) by more than 20% over the last year. Mid-caps have barely fared any better with the [Russell Midcap](#) and [Midcap Value indexes](#) up 15.5% and 10.9% over the same period.

U.S. Large Caps Have Been the Most Reliable Market Since the 2023 Regional Banking Crisis

Despite the pessimism pervading the industry, we believe there are still ways to maintain exposure to regional banks within small and mid-cap equity allocations without suffering drastically poor performance or sacrificing business quality.

But we also understand that headline risks influence market narratives and direction, so it's important to review the composition of WisdomTree's small and mid-cap products to identify and understand existing exposures.

Company Nightmares Had Little Impact

Among the banks that made headlines in 2023, we had minimal exposure to PacWest Bancorp (PACW) and Signature Bank (SBNY) within the [WisdomTree U.S. MidCap \(EZM\)](#), [U.S. MidCap Dividend \(DON\)](#) and [U.S. SmallCap Dividend \(DES\)](#) Funds, resulting in negligible performance impacts during the crisis.

Neither Silicon Valley Bank (formerly SIVB) nor First Republic Bank (formerly FRC) was held in any WisdomTree small-cap or mid-cap product when they failed and had not been in eight years.

The most recent headache, New York Community Bancorp (NYCB), is held within [EZM](#) and [DON](#) and has obviously weighed on performance, but not as much as the collapse in share price might suggest.

Market-Like Exposures within WisdomTree Small Caps

Banks often exhibit characteristics synonymous with [value](#) investing, including low [price-to-earnings \(P/E\)](#) multiples and large dividend payments. Financials usually pay the largest proportion of dividends among U.S. sectors, often dwarfing other heavyweight payers like Health Care and Information Technology by 4% to 5%.

As a result, value indexes tend to have larger exposures to banks than those predicated on other investment styles.

WisdomTree’s three oldest U.S. small-cap Indexes also skew toward value by emphasizing similar fundamentals, like earnings and dividends, that ultimately place banks in the same category.

Both the earnings-weighted [WisdomTree U.S. SmallCap Fund \(EES\)](#) and dividend-weighted [DES](#) exhibit market-like regional bank exposures today, though they’ve historically been under-weight in the Russell 2000 Value Index.

The recent pickups resulted from our annual rebalance process in December 2023, and reflect regional banks’ growing proportion of aggregate earnings and dividends among U.S. small caps, despite headline noise concerning specific companies.

Among the regional banks within [DES](#), dividends are the primary feature. Collectively, they offer nearly 100 [basis points](#) of additional yield over those in the Russell 2000 Value while approximating the Russell index across most other metrics.

[EES's](#) regional banks, which are earnings-weighted, result in a higher quality composite than those in the Russell 2000 value. There’s a notable improvement in earnings and [return on equity \(ROE\)](#) that reduces prevailing P/E multiples by about one point each. It also shaves a percentage point off banks’ aggregate net interest expense as a percentage of EBIT, perhaps signaling a healthier debt burden.

Small Caps-Weighted Average Fundamentals of Regional Banks in Each Fund/Index

Fund/Index	# of Banks	Dividend Yield	ROE	ROA	P/E	Est. P/E	Net Income Margin	Net Interest Expense as % of EBIT
EES	177	3.5%	11.0%	1.1%	9.8x	10.2x	19.2%	19.5%
DES	150	4.3%	10.1%	1.0%	10.9x	11.3x	18.9%	22.9%
Russell 2000 Value	219	3.4%	10.2%	1.1%	10.7x	11.2x	19.8%	20.4%

WisdomTree’s High-Quality Small Caps Are an Exception

The [WisdomTree U.S. SmallCap Quality Dividend Growth Fund \(DGRS\)](#), however, introduces another component that indirectly reduces regional bank exposures relative to the broader market. [DGRS](#) systematically selects the top 50% companies within the dividend-paying U.S. small-cap universe with the highest quality scores. By screening for ROE and [return on assets \(ROA\)](#) within our quality definition, many regional banks are avoided

since they tend to report high ROE but lower ROA by nature of their business.
Weight in Regional Banks over Time: DGRS vs. Russell Small Cap Indexes

Sources: WisdomTree, FactSet, MSCI, as of 2/29/24. You cannot invest directly in an index.

By design, [DGRS's](#) regional bank exposure is regularly under-weight in the Russell 2000 and 2000 Value indexes.

The sole exception was a result of our 2020 rebalance and the additional emphasis on earnings growth estimates in our quality framework. Banks had high earnings growth estimates in the aftermath of the pandemic and were rewarded with larger allocations. This proved to be beneficial as Financials were the top sector contributor for [DGRS](#) during 2021 relative to the Russell 2000 Value Index.

Throughout its full history, however, [DGRS](#) has routinely been under-weight in regional banks by promoting high-quality small caps.

Modest Over-weight Allocations across WisdomTree Mid-Cap Indexes

Although regional banks are not as prevalent in market cap-weighted mid-cap indexes as they are in small-cap indexes, dividend- and earnings-weighted methodologies have similar influences on overall exposures.

The regular over-weight allocation to regional banks within [DON](#) is a byproduct of their preference for dividends and larger relative contribution to the U.S. mid-cap [Dividend Stream™](#).

Weight in Regional Banks over Time: DON vs. Russell Midcap Indexes

There's a similar effect within [EZM](#), which weights by earnings rather than dividends.
Weight in Regional Banks over Time: EZM vs. Russell Midcap Indexes

Here, over-weight allocations reflect exposure to companies already generating substantial profits within the aggregate U.S. mid-cap [Earnings Stream™](#).

Both the dividend- and earnings-weighted approaches improve upon the fundamentals of the regional banks within the Russell Midcap Value Index, most notably in quality metrics. Each adds a bit more to ROE and ROA while reducing trailing P/Es by about half a point.

Perhaps most important, however, is the improvement in net income margin, which adds about 4% versus the market in each Index. This is paired with slight reductions in interest expenses as a percentage of EBIT, which conveys that bank exposures in each Index currently offer healthier profits with proportionally reduced financing costs.

Mid-Caps-Weighted Average Fundamentals of Regional Banks in Each Fund/Index

For the most recent month-end standardized performance, please see the respective ticker: [EZM](#), [DON](#).

Fortunately, forward multiples are not sacrificed for these improvements, either. Estimated P/Es for the bank exposures remain similar to those of the Russell Midcap Value.

A Preference for Fundamentally weighted Small/Mid-Caps

Overall, we believe that earnings- and dividend-weighted allocations to regional banks may be a preferred way to endure the industry's headwinds without selling into a down market, as they offer fundamental improvements that may better insulate bank holdings from ongoing [volatility](#).

And if investors like the valuations within the small-cap value segment of the market but want to avoid further deterioration in regional banks, the [DGRS](#) could fit that bill.

More broadly, we are optimistic on U.S. small-caps and mid-caps and overweight size within WisdomTree's Model Portfolios, with a focus on dividend-payers and reduced multiples that were priced for [recession](#). Consistent with Professor Siegel's views, we anticipate broader equity market participation during 2024 (as opposed to last year's concentrated, narrow leadership within mega-cap technology names) to be fueled by reduced probabilities of recession. The possibility of a subsequent "catch-up" rally as recession risks subside and the Fed pivots to more accommodative monetary policy helps support our upgraded view on size.

Our Model Portfolio Investment Committee (MPIC) added to [DGRS](#) at the end of 2023 to enact our views, and we're optimistic that the marriage of size and quality will be additive in 2024.

DEFINITIONS

KBW Nasdaq Regional Banking Index (KRX): The KBW Regional Banking Index seeks to reflect the performance of U.S. companies that do business as regional banks or thrifts.

S&P Regional Banks Select Industry Index: S&P Select Industry Indices are designed to measure the performance of narrow GICS® sub-industries. The S&P Regional Banks Select Industry Index comprises stocks in the S&P Total Market Index that are classified in the GICS Regional Banks sub-industry.

S&P 500 Index: Market capitalization-weighted benchmark of 500 stocks selected by the Standard and Poor's Index Committee designed to represent the performance of the leading industries in the United States economy.

Small caps: new or relatively young companies that typically have a market capitalization between \$200 million to \$2 billion.

Mid-Cap: Characterized by exposure to the next 20% of market capitalization (after the top 70% have been removed) within the Value, Blend or Growth style zones with the majority of the fund's weight.

Russell 2000 Index: Measures the performance of the small-cap segment of the U.S. equity universe. The Russell 2000 is a subset of the Russell 3000 Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership.

Russell 2000 Value Index: measures the performance of small-cap value segment of the U.S. equity universe. It includes those Russell 2000 Index companies with lower price-to-book ratios and lower forecasted growth values.

Large-Capitalization (Large-Cap): A term used by the investment community to refer to companies with a market capitalization value of more than \$10 billion. Large cap is an abbreviation of the term "large market capitalization". Market capitalization is calculated by multiplying the number of a company's shares outstanding by its stock price per share.

Russell Midcap Index: The Russell Midcap Index measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Midcap Index companies with lower price-to-book ratios and lower forecasted growth values.

Russell MidCap Value Index: measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Midcap Index companies with lower price-to-book ratios and lower forecasted growth values.

Value: Characterized by lower price levels relative to fundamentals, such as earnings or dividends. Prices are lower because investors are less certain of the performance of these fundamentals in the future. This term is also related to the Value Factor, which associates these stock characteristics with excess returns vs the market over time.

Price-to-earnings (P/E) ratio: Share price divided by earnings per share. Lower numbers indicate an ability to access greater amounts of earnings per dollar invested.

Basis point: 1/100th of 1 percent.

Return on Equity (ROE): Measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Return on assets (ROA): Firm profits (after accounting for all expenses) divided by the firm's total assets. Higher numbers indicate greater profits relative to the level of assets utilized to generate them.

Dividend Stream: Refers to the regular dividends per share multiplied by the number of shares outstanding.

Earnings Stream[®]: Earnings per share x the number of shares outstanding. For an index, these totals are added for all constituents.

Volatility: A measure of the dispersion of actual returns around a particular average level.

Recession: two consecutive quarters of negative GDP growth, characterized generally by a slowing economy and higher unemployment.
