
ACCESS THE GROWTH OF PLATFORM COMPANIES WITH AN ETF

Jeremy Schwartz – Global Chief Investment Officer
05/22/2019

WisdomTree is known as a [dividend](#) and [value](#) investing shop. This reputation stems from our roots, launching indexes that rebalanced away from [market capitalization](#), and toward [fundamentals](#), such as dividends and earnings, in an attempt to guard against speculative [bubbles](#).

But we are always looking for innovative [baskets](#) that offer the potential to outperform the market, whether it's from rules-based rebalancing, an active combination of factors or other themes that can add value over time.

Here's an example that's come to fruition: We believe there's a compelling, long-term market opportunity created by the evolution of platform business models. We're excited to announce the launch of the [WisdomTree Modern Tech Platforms Fund \(PLAT\)](#), which provides exposure to these technology-driven platform companies. WisdomTree defines a modern technology platform as a company with a non-linear, multi-sided business model focused on creating value by facilitating interactions between two or more interdependent groups through technology.

Successful platform-based businesses create large, scalable networks that facilitate transactions between interdependent groups of consumers and producers. While the traditional business model creates value through linear supply chain production, a platform business is a non-linear¹, asset-light model that creates value through connections. Many are gaining market share at the expense of traditional linear businesses, and doing so with better economies of scale and long-term profitability figures.

At a certain size, the benefit of further scale can be limited for a linear business but remains unlimited for a platform. Platform businesses can benefit from network effects, as networks become increasingly valuable to users as they grow. Put another way, the [marginal cost](#) of adding an additional user approaches zero as a platform scales; conversely, a linear model reaches a point where the marginal cost outweighs the benefit.

The structural advantages of the platform-based businesses we seek to invest in are reflected in financial metrics as solid revenue growth, margin expansion, substantial [free cash flow](#) generation and strong returns on capital.

Relative to the companies in the [S&P 500 Index](#), the constituents of the [WisdomTree Modern Tech Platforms Index \(WTMDPL\)](#) have generated greater revenue growth and consistent mid-teens earnings growth.²

WTMDPL Median Sales and Earnings Growth

Median Sales Growth		
Index	1-Year	3-Year
WTMDPL	22.8%	19.2%
S&P 500	7.2%	6.8%

Median Earnings Growth		
Index	1-Year	3-Year
WTMDPL	14.4%	14.1%
S&P 500	17.6%	10.3%

Investment Methodology

To build this new Index, wisdomTree licensed data from Applico, a platform consulting business. Applico’s founder and CEO, Alex Moazed, and principal, Nicholas Johnson, researched platform models extensively to write *Modern Monopolies*, an Amazon best

seller, detailing the characteristics of different platforms.

WTMDPL is an equally weighted Index composed of mid- and large-cap companies. The WisdomTree Modern Tech Platforms Fund seeks to track the price and yield performance, before fees and expenses, of WTMDPL.

Modernizing Your Portfolio

PLAT provides exposure to U.S., Asian and European equities with strong past and prospective fundamental growth and could be a suitable candidate to complement or replace growth-oriented investment strategies.

¹Linear business models create value downstream through a supply chain; non-linear business models do not create value downstream through a supply chain.

²1- and 3-year median sales growth for WTMDPL and the S&P 500 Index are calculated as the median value of each constituent's 1- and 3-year annualized sales growth metrics. 1- and 3-year median earnings growth for WTMDPL and the S&P 500 Index are calculated as the median value of each constituent's 1- and 3-year annualized net income, adjusted for unusual items, growth metrics.

Important Risks Related to this Article

There are risks associated with investing, including possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty; these risks may be enhanced in emerging, offshore or frontier markets. Technology platform companies have significant exposure to consumers and businesses and a failure to attract and retain a substantial number of such users to a company's products, services, content or technology could adversely affect operating results. Technological changes could require substantial expenditures by a technology platform company to modify or adapt its products, services, content or infrastructure. Technology platform companies typically face intense competition and the development of new products is a complex and uncertain process. Concerns regarding a company's products or services that may compromise the privacy of users, or other cybersecurity concerns, even if unfounded, could damage a company's reputation and adversely affect operating results. Many technology platform companies currently operate under less regulatory scrutiny but there is significant risk that costs associated with regulatory oversight could increase in the future. The Fund invests in the securities included in, or representative of, its Index regardless of their investment merit and the Fund does not attempt to outperform its Index or take defensive positions in declining markets. The composition of the Index is heavily dependent on quantitative and qualitative information and data from one or more third parties and the Index may not perform as intended. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.

DEFINITIONS

Dividend: A portion of corporate profits paid out to shareholders.

Value: Characterized by lower price levels relative to fundamentals, such as earnings or dividends. Prices are lower because investors are less certain of the performance of these fundamentals in the future. This term is also related to the Value Factor, which associates these stock characteristics with excess returns vs the market over time.

Market Capitalization: Market cap = share prices x number of shares outstanding. Firms with the highest values receive the highest weights in approaches designed to weight firms by market cap.

Fundamentals: Attributes related to a company's actual operations and production as opposed to changes in share price.

Bubble: when market participants drive stock prices above their "fair value" in relation to some system of stock valuation.

Baskets: The composition of an ETF in terms one creation/redemption unit.

Marginal Cost: The cost added by producing one additional unit of a product or service.

S&P 500 Index: Market capitalization-weighted benchmark of 500 stocks selected by the Standard and Poor's Index Committee designed to represent the performance of the leading industries in the United States economy.
