

CAPTURING DIVIDEND GROWTH REQUIRES A NIMBLE RESPONSIVENESS

Christopher Gannatti – Global Head of Research
04/24/2024

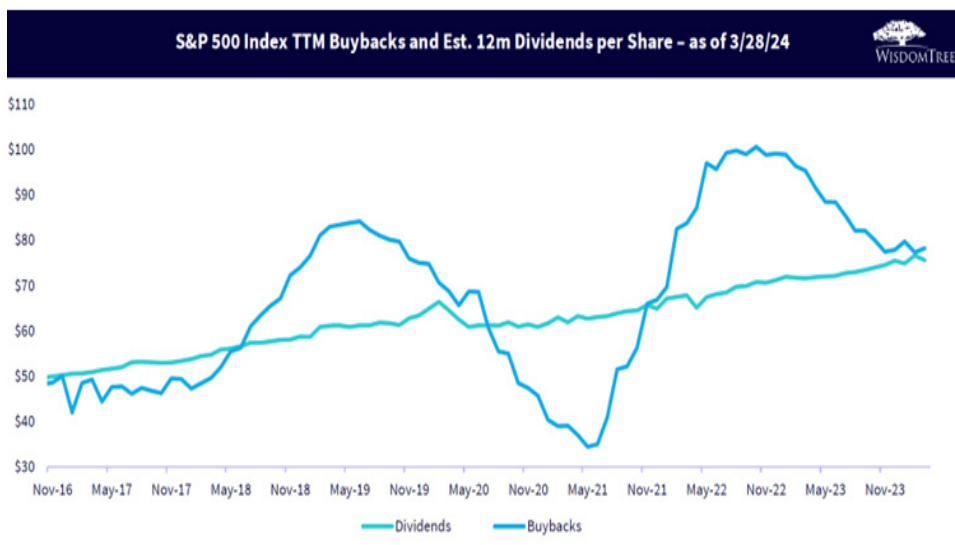

In 2024, we have seen Meta Platforms, Salesforce.com and Booking Holdings (parent company of Priceline.com) initiating dividend payments.¹ Many technology companies have accumulated significant amounts of cash, with more calls to return this cash to shareholders by initiating dividends.

Of course, [dividends](#) are not the sole way cash can be returned to shareholders. In the U.S. equity landscape, buybacks can often be even larger.

- The psychology with which the investment world treats dividends feels more like an ongoing arrangement between the shareholders and the company and, once declared, expectations are to continue and even moderately increase over time. True, no dividend payment is ever ‘guaranteed’, but if a dividend is reduced or curtailed, it can be headline news amongst certain large companies—news these companies would prefer to avoid.
- [Buybacks](#) are less transparent. Boards of directors can announce buybacks that could occur over specific time frames, but they are not known as they are happening and are only visible in hindsight where one can confirm them on the quarterly statement of cash flows.

This chart on dividends versus buybacks shows the stability versus cyclical and [volatility](#) of buyback streams—the two are hardly comparable if one wants a predictable stream of cash flows from stocks.

Figure 1: S&P 500 Index Trend of Dividends and Buybacks on a Per-Share Basis

Sources: WisdomTree, FactSet, S&P. You cannot invest directly in an index. Historical charts based on trailing five-year period. Dividends are not guaranteed and may fluctuate. **Past performance is not indicative of future results.**

One of the biggest categories—reflecting all the demand for this concept—is for dividend-growth ETFs. Investors love the idea of a company raising its dividend over time, and they love the idea of a stream of income that has the potential to grow over time over time. Here are five of the largest such ETFs in the ecosystem:

- **WisdomTree U.S. Quality Dividend Growth Fund (DGRW):** The WisdomTree U.S. Quality Dividend Growth Fund is designed to track, before fees and expenses, the total return performance of the [WisdomTree U.S. Quality Dividend Growth Index](#). The Index focuses on companies with strong [growth](#) and [quality](#) metrics, as defined by 1) estimated earnings growth over the next 3–5 years, 2) three-year average [return on equity](#) and 3) three-year average [return on assets](#). The Index is weighted by cash dividends.²
- **Vanguard Dividend Appreciation Index Fund (VIG):** The Vanguard Dividend Appreciation Index Fund is designed to track, before fees and expenses, the total return performance of the [S&P U.S. Dividend Growers Index](#). The Index measures the performance of U.S. companies that have followed a policy of consistently increasing dividends every year for at least 10 consecutive years. The Index excludes the top 25% of the highest-yielding eligible companies. Weighting is by [float-adjusted market capitalization](#).³
- **SPDR S&P Dividend ETF (SDY):** The SPDR S&P Dividend ETF is designed to track, before fees and expenses, the total return performance of the [S&P High Yield Dividend Aristocrats Index](#). The Index measures the performance of companies within the [S&P Composite 1500 Index](#) universe that have followed a managed-dividends policy of consistently increasing dividends every year for at least 20 years. Weighting is focused on [dividend yield](#).⁴
- **iShares Select Dividend ETF (DVY):** The iShares Select Dividend ETF is designed to track, before fees and expenses, the total return performance of the [Dow Jones U.S. Select Dividend Index](#). The Index screens on numerous criteria, which include, but are not limited to, 1) nonnegative historical five-year dividend-per-share growth, 2) a five-year average dividend-to-earnings-per-share ratio of less than or equal to 60% and 3) payments of dividends in each of the prior five years. Weighting is based on indicated annual dividends.⁵
- **iShares Core Dividend Growth ETF (DGRO):** The iShares Core Dividend Growth ETF is designed to track, before fees and expenses, the total return performance of the [Morningstar U.S. Dividend Growth Index](#). The Index screens on numerous criteria, which include, but are not limited to, 1) a positive forecast of consensus earnings, 2) a dividend payout ratio less than 75% and 3) five years of dividend payments and uninterrupted annual dividend growth. The Index is dividend-dollar-weighted.⁶

To summarize one critical point involving historical dividend-growth requirements for each of the indexes tracked by these ETFs:

- [DGRW](#)—no historical dividend-growth requirement.
- [VIG](#)—10 consecutive years of historical dividend growth.
- [SDY](#)—20 consecutive years of historical dividend growth.
- [DVY](#)—nonnegative dividend per share growth for five years.
- [DGRO](#)—five years of dividend payments and uninterrupted annual dividend growth.

The reason we underline that point is simple: on February 1, 2024, Meta Platforms initiated a regular cash dividend.⁷

WisdomTree initiated a [special rebalance to add this immediately substantial dividend payer to its appropriate Indexes](#), including the one tracked by [DGRW](#), whereas these other approaches will have to wait varying numbers of years before Meta Platforms becomes eligible.

Of course, these dividend-growth requirements in a vacuum don't mean much—we believe that what investors really care about are returns. If waiting 20 years to include companies that grow their dividends has been a route to strong performance—that's great. If not, it's a very stringent criterion that investors aren't being compensated for.

Where the Rubber Meets the Road: Total Returns

Many view the 10-year period as the most valid proof point in terms of returns. Being around for 10 years in the competitive investment management industry is impressive, and there is an implicit assumption that one should experience a few ups and downs in equity markets during a 10-year period. In figure 2a:

- [DGRW](#) had the strongest annualized 10-year return. VIG is in second place, even with its fee of 0.06%—we note that these results are net of fees. SDY is third, and DVY is last. DGRO did not quite have 10 full years of history as of this writing.
- We find it telling that—on an after-fee basis—[DGRW](#) actually had the strongest returns of the ETFs shown year-to-date, 1-year, 3-year, 5-year and 10-year. Remember, it is the only Fund whose underlying index does not have a requirement for historical dividend growth.

Figure 2a: Standardized Returns

Fund Name	Ticker Symbol	Expense Ratio	Inception Date	Year-to-Date	1-Year	3-Year	5-Year	10-Year	Since Inception
WisdomTree U.S. Quality Dividend Growth Fund (NAV)	DGRW	0.28%	May 22, 2013	8.87%	24.48%	12.27%	14.48%	12.91%	13.20%
WisdomTree U.S. Quality Dividend Growth Fund (MP)	DGRW	0.28%	May 22, 2013	8.79%	24.46%	12.17%	14.45%	12.89%	13.19%
Vanguard Dividend Appreciation Index Fund (NAV)	VIG	0.06%	Apr 21, 2006	7.72%	20.96%	9.62%	12.85%	11.48%	9.69%
Vanguard Dividend Appreciation Index Fund (MP)	VIG	0.06%	Apr 21, 2006	7.62%	20.89%	9.57%	12.84%	11.47%	9.69%
SPDR S&P Dividend ETF (NAV)	SDY	0.35%	Nov 8, 2005	5.88%	9.17%	6.51%	8.76%	9.83%	8.95%
SPDR S&P Dividend ETF (MP)	SDY	0.35%	Nov 8, 2005	5.60%	8.95%	6.40%	8.72%	9.80%	8.94%
iShares Select Dividend ETF (NAV)	DVY	0.38%	Nov 3, 2003	6.01%	9.29%	6.35%	8.61%	9.07%	8.26%
iShares Select Dividend ETF (MP)	DVY	0.38%	Nov 3, 2003	5.95%	9.32%	6.30%	8.60%	9.06%	8.26%
iShares Core Dividend Growth ETF (NAV)	DGRO	0.08%	Jun 10, 2014	8.54%	19.15%	8.91%	12.29%	N/A	11.60%
iShares Core Dividend Growth ETF (MP)	DGRO	0.08%	Jun 10, 2014	8.46%	19.12%	8.88%	12.27%	N/A	11.60%

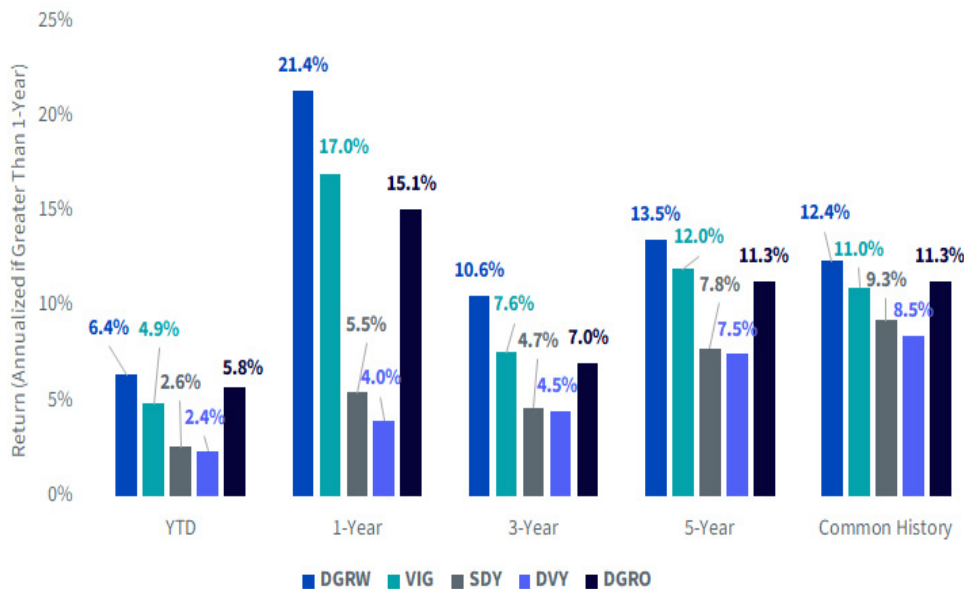

Source: WisdomTree; specifically, data is from the PATH Fund Comparison Tool, as of 3/31/24. NAV denotes total return performance at net asset value. MP denotes market price performance. **Past performance is not indicative of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted.**

If we remove the need to look only at standardized returns (as of the end of a given quarter) and look as of April 12, 2024:

- DGRW was the strongest across the board, again. VIG and DGRO were the two top competitors in each of these periods. SDY and DVY were the relative laggards in each of these periods.

Figure 2b: Periodic Returns

Sector Exposure: The Foundation of Understanding Dividend-Oriented ETFs

Different sectors have different relationships to dividend payments. Typically, one of the starkest comparisons involves looking at Utilities versus Information Technology:

- Utilities tend to have a high current dividend yield, but utility companies are not growing their earnings very quickly and, therefore, tend not to grow their dividends very quickly.
- Information Technology companies have been the engine of growth for the U.S. equity market since the [global financial crisis of 2008-2009](#). Many of the largest companies in this sector are paying extremely large dividends, buying back lots of their own stock and STILL accumulating massive amounts of cash on their balance sheets. However, many of these firms may not have been paying dividends for 10 or 20 years, and we believe waiting for 10 or 20 years is an arbitrary requirement that, for example, would have disqualified Apple from 2012 (dividend initiation)⁸ to 2022 if one was looking for 10 years.

When we look at figure 3:

- SDY and DVY emphasized weight to Utilities ahead of the other strategies. Similarly, they tilted away from the Information Technology sector.
- [DGRW](#), VIG and DGRO placed more weight in the Information Technology sector and de-emphasized weight to the Utilities sector.

We think that contrast ultimately says a lot in terms of how different strategies are generating different performances.

Figure 4: Important Information Regarding Funds Compared in This Report

Fundamentals	WisdomTree U.S. Quality Dividend Growth Fund	Vanguard Dividend Appreciation Index Fund	SPDR S&P Dividend ETF	iShares Select Dividend ETF
Objective	The WisdomTree U.S. Quality Dividend Growth Fund is designed to track, before fees and expenses, the total return performance of the WisdomTree U.S. Quality Dividend Growth Index. The Index focuses on companies with strong growth and quality metrics, as defined by 1) estimated earnings growth over the next 3-5 years 2) three-year average return on equity 3) three-year average return on assets. The Index is weighted by cash dividends.	The Vanguard Dividend Appreciation Index Fund is designed to currently track, before fees and expenses, the total return performance of the S&P U.S. Dividend Growers Index. The Index is designed to measure the performance of U.S. companies that have followed a policy of consistently increasing dividends every year for at least 10 consecutive years. The Index excludes the top 25% highest-yielding eligible companies. Weighting is by float-adjusted market capitalization.	The SPDR S&P Dividend ETF is designed to track, before fees and expenses, the total return performance of the S&P High Yield Dividend Aristocrats Index. The Index measures the performance of companies within the S&P Composite 1500 Index universe that have followed a managed-dividends policy of consistently increasing dividends every year for at least 20 years. Weighting is focused on dividend yield.	The iShares Select Dividend ETF is designed to track, before fees and expenses, the total return performance of the Dow Jones U.S. Select Dividend Index. The Index screens on numerous criteria which includes but is not limited to nonnegative historical five-year dividend-per-share growth, five-year average dividend to earnings-per-share ratio of less than or equal to 60%, and payments of dividends in each of the prior five years. Weighting is based on indicated annual dividends.
Price to Sales Ratio	2.83x	2.31x	1.47x	1.11x
Price to Book Ratio	6.47x	5.21x	3.12x	1.88x
Price to Cash Flow Ratio	13.35x	13.69x	12.58x	7.54x
Est. Price to Earnings Ratio	19.65x	19.66x	17.31x	12.08x
Est. Price to Earnings Ratio (excludes firms with negative earnings)	19.65x	19.66x	17.31x	12.08x
% of Firms with Negative Earnings	0.00%	0.59%	2.28%	4.19%
Gross Expense Ratio	0.28%	0.06%	0.35%	0.38%
Total Assets Under Management (millions)	\$12,341.89	\$93,700.00	\$20,275.46	\$18,008.26

Important Risks Related to this Article

There are risks associated with investing, including the possible loss of principal.

Funds focusing their investments on certain sectors increase their vulnerability to any single economic or regulatory development. This may result in greater share price volatility. Dividends are not guaranteed, and a company currently paying dividends may cease paying dividends at any time. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.

All funds are managed differently and do not react the same to economic or market events. The investment objectives, strategies, policies or restrictions of other funds may differ and more information can be found in their respective prospectuses. Therefore, we generally do not believe it is possible to make direct fund to fund comparisons in an effort to highlight the benefits of a fund versus another similarly managed fund.

For the top 10 holdings of DGRW please visit the Fund's fund detail page at <https://www.wisdomtree.com/investments/etfs/equity/dgrw>

DEFINITIONS

Dividend: A portion of corporate profits paid out to shareholders.

Buyback: When a company uses its own cash to purchase its own outstanding shares; may positively impact the share price.

Volatility: A measure of the dispersion of actual returns around a particular average level.

Growth: Characterized by higher price levels relative to fundamentals, such as dividends or earnings. Price levels are higher because investors are willing to pay more due to their expectations of future improvements in these fundamentals.

Quality: Characterized by higher efficiency and profitability. Typical measures include earnings, return on equity, return on assets, operating profitability as well as others. This term is also related to the Quality Factor, which associates these stock characteristics with excess returns vs the market over time.

Return on Equity (ROE): Measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Return on assets (ROA): Firm profits (after accounting for all expenses) divided by the firm's total assets. Higher numbers indicate greater profits relative to the level of assets utilized to generate them.

S&P U.S. Dividend Growers Index: The S&P U.S. Dividend Growers Index is designed to measure the performance of U.S. companies that have followed a policy of consistently increasing dividends every year for at least 10 consecutive years.

Float-adjusted market capitalization: Share price x number of shares outstanding, adjusted for the fact that in many emerging markets, not all of the shares outstanding regularly trade, which leads to a reduction in the number of shares outstanding used in the calculation.

S&P High Yield Dividend Aristocrats Index: Designed to track the performance of dividend-paying companies in the U.S. that have increased their annual dividend payments for the last 20 or more consecutive years.

S&P Composite 1500 Index: A stock market index of US stocks made by Standard & Poor's which includes all stocks in the S&P 500, S&P 400, and S&P 600.

Dividend yield: A financial ratio that shows how much a company pays out in dividends each year relative to its share price.

Dow Jones U.S. Select Dividend Index: The index is a modified market capitalization approach and weights by dividend yield. Stocks are selected for fundamental strength relative to their peers, subject to various screens such as dividend quality and liquidity.

Morningstar U.S. Dividend Growth Index: The Morningstar US Dividend Growth Index is designed to provide exposure to securities in the Morningstar US Markets Index with a history of uninterrupted dividend growth and the capacity to sustain that growth.

The Global Financial Crisis: Refers to the period of extreme stress in global financial markets and banking systems between mid 2007 and early 2009.
