THE WEAK YEN IS FUELING JAPAN'S INFLATIONARY EQUITY CULTURE

Jeff Weniger - Head of Equity Strategy 05/28/2024

For Japanese of a certain age, the inflation shock of the Covid and post-Covid era is a bit of a wake-up call. After trending either downward or ever-so-slightly upward since the 1990s, suddenly Japan's <u>CPI</u> bolted higher in just the last few years. The primary cause: a collapse in the yen from ¥103 per dollar in early 2021 to ¥155 (figure 1).

Figure 1: USDJPY Has Fueled Japan's Surprise Inflation

Sources: Refinitiv, Statistics Bureau, Ministry of Internal Affairs & Communication, Japan, as of March 2024 for CPI. JPY exchange rate as of 5/7/24.

This jolt has been more than psychological.

With its currency in the basement, the other side of the inflation coin is Japan's sudden competitiveness on the wage front. In late 2012, when the yen was so strong that a dollar only fetched \$77.8, a Japanese worker who earned \$1,000 could convert that wage to \$12.85. Fast forward to the present. In the last dozen or so years, the average Japanese worker's wage only grew at a 0.6% yearly rate, according to the OECD. But when you convert today's \$1,075.8 wage to USD, that is \$6.92.

In contrast, an American who earned \$12.85 back then has seen annual income growth of 3.6%. Compounded to the present, the American worker is up to \$19.46. That is about *triple* the Japanese worker's compensation in USD terms (figure 2).

Figure 2: Japan's Wage Arbitrage

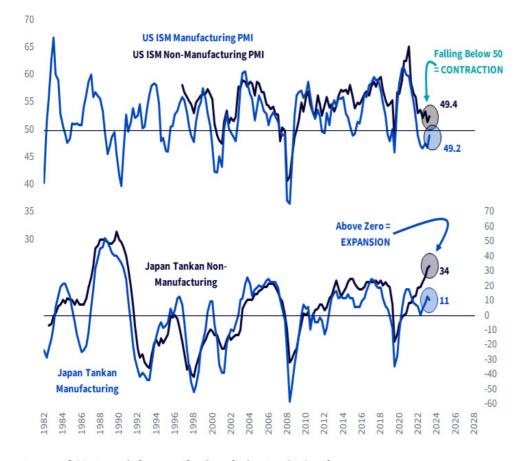

Inputs	<u>Japanese Worker</u>					U.S. Worker Who Earned Same Amount as Japanese Worker in 2012	
	Wage		Exchange Rate vs. USD		Japanese Wage in USD	Wage (in USD)	
Q3/2012	¥1,000	÷	¥77.80	Ξ	\$12.85	\$12.85	
Annual Wage Growth, Q3/2012 - Q2/2024	+0.6%		Because of This		The Japanese Worker's USD Equivalent Wage Is	+3.6%	While the American's Wage Grew 3.6% per Year to \$18.30
Q2/2024	¥1,075.8	*	¥155.52	=	\$6.92	\$19.46	

Sources: Refinitiv, OECD, as of Q2/24 with currency conversion as of 5/9/24 exchange rate. The 2012 data is from the third quarter of that year.

In the U.S., both the manufacturing and services gauges for the <u>ISM PMI</u> have broken below 50, the line of demarcation¹ between expansion and contraction (figure 3). Japan's Tankan survey is in the opposite camp: both gauges are above the zero line on that diffusion index. In the case of services, the 34 it registered in the latest survey is the highest in three decades.

It's little wonder why this is the case: wages are paid in cheap yen while foreign revenues are collected in stronger currencies such as the dollar.

Figure 3: U.S. in Contraction, Japan in Expansion

Sources: Refinitiv, ISM, Bank of Japan, as of April 2024 for the U.S. and Q1/2024 for Japan.

I've written extensively about the country's expansion of the NISA retirement system, the country's defined contribution program. The bullish event was the tripling in the

annual maximum contribution amount that went into effect for 2024. Depending on the exchange rate at any given time, the contribution limit, in USD terms, leaped from \$7,500-\$8,000 per year to \$22,500-\$24,000.

As we imagined would happen, a large amount of NISA contributions have been going into Japanese stocks, seemingly on account of many Japanese coming to realize that 0% yields on bonds are no longer going to cut it amid the country's sudden flirtation with structural inflation.

The Japan Times reported on May 5:

Nearly 50% of investments made through the new Nippon Individual Savings Account, or NISA, program went to Japanese stocks from January through March, a survey has

"The amount bought via NISA was more than three times the year-before level," Daiwa Securities Managing Executive Director Kotaro Yoshida said, explaining moves by NISA account holders at the company...

Stocks with stable and high dividends were especially popular.

The confidence to purchase Japanese equities has been helped by the Name and Shame <u>List</u> initiative of the Tokyo Stock Exchange (TSE), which is strong-arming companies into a shareholder-friendly corporate governance regime.

Under a push called "Management That IS Conscious of Cost of Capital and Stock Price," they told all listed companies that they needed to put together proposals for getting their <u>price-to-book ratios</u> and profitability metrics higher. Those who didn't propose a corporate governance game plan would be shamed by having their name on the notorious

It worked. Most companies have complied (figure 4). We tabulate that 78.7% of the market capitalization of <u>DXJ</u>, the <u>WisdomTree Japan Hedged Equity Fund</u>, created a proposal. In our two small-cap mandates, DFJ and DXJS, 60%-61% of the market cap has developed a profitability strategy that is to the stock exchange's satisfaction.

Sources: MSCI, WisdomTree, holdings as of 4/3/24. Disclosures from Tokyo Stock Exchange, as of 3/31/24.

For definitions of terms in the chart above, please visit the glossary.

Because the TSE is so focused on sub-1.0 price-to-book ratios, there is something that is promising for DXJ at the moment: nobody wants to be the executive who presides over a lowly equity valuation. In terms of a catalyst for DXJ, about 20% of its exposure is in stocks whose price-to-book ratio is below 1.0, ostensibly because most of them have not (yet) complied with the demands of the TSE. As they do-so the theory goes-then perhaps

Sources: Refinitiv, WisdomTree, MSCI, as of 3/31/24.

We have three long-only Japan Funds. They are:

- DXJ: WisdomTree Japan Hedged Equity Fund
- DXJS: WisdomTree Japan Hedged Small Cap Equity Fund
- DFJ: WisdomTree Japan Small Cap Dividend Fund

1 Demarcation = the marking of the limits or boundaries of something

Important Risks Related to this Article

DXJ/DXJS/DFJ: There are risks associated with investing, including the possible loss of principal. Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. The Fund focuses its investments in Japan, thereby increasing the impact of events and developments in Japan that can adversely affect performance. This may result in greater share price volatility. Funds focusing their investments on smaller companies or certain sectors increase their vulnerability to any single economic or regulatory development. Please read the Fund's prospectus for specific details regarding the Fund's risk profile.

DXJ/DXJS: Investments in currency involve additional special risks, such as credit risk, interest rate fluctuations, and derivative investments, which can be volatile and may be less liquid than other securities, and more sensitive to the effect of varied economic conditions. As this Fund can have a high concentration in some issuers, the Fund can be adversely impacted by changes affecting those issuers. Due to the investment strategy of this Fund it may make higher capital gain distributions than other ETFs. Dividends are not guaranteed, and a company currently paying dividends may cease paying dividends at any time.

For the top 10 holdings of DFJ please visit the Fund's fund detail page at https://www.wisdomtree.com/investments/etfs/equity/dfj

For the top 10 holdings of DXJ please visit the Fund's fund detail page at https://www.wisdomtree.com/investments/etfs/equity/dxj

DEFINITIONS

<u>Consumer Price Index (CPI)</u>: A measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food and medical care. The CPI is calculated by taking price changes for each item in the predetermined basket of goods and averaging them; the goods are weighted according to their importance. Changes in CPI are used to assess price changes associated with the cost of living.

ISM Services PMI: The ISM Services PMI (formerly the ISM Non-Manufacturing Index) provides a detailed look at the economy from a non-manufacturing standpoint.

<u>Price-to-book ratio</u>: Share price divided by book value per share. Lower numbers indicate an ability to access greater amounts of earnings per dollar invested.
