
WISDOMTREE'S 10 YEAR ANNIVERSARY: HOW DID WE DO?

Luciano Siracusano – Chief Investment Strategist
06/16/2016

A decade ago, WisdomTree launched its first 20 exchange-traded funds (ETFs) on the New York Stock Exchange (NYSE). The launch was historic because it represented, at that time, the largest listing by a single issuer in the 200-year history of the NYSE. WisdomTree's debut on June 16, 2006, included the industry's first international small-cap ETF, the first European small-cap ETF and the first Japanese small-cap ETF. But the listing was also historic because it gave investors, for the first time, a way to invest in [dividend-weighted](#) ETFs in most major equity markets around the world—a [fundamental](#) alternative to traditional [market capitalization weighted](#) investing.

The 2006 launch was based on WisdomTree's original vision that weighting equity markets by income, rather than by market capitalization, would represent a significant evolution in indexing. After testing the performance of dividend-paying securities spanning several decades, WisdomTree concluded that by using only dividend-paying stocks and weighting them once a year based on the dollar value of dividends companies pay—rather than their market value—that it was possible to generate higher returns, often with lower [volatility](#), than traditional cap-weighted approaches.

[Passive](#) investing has undoubtedly served investors well over the past 30 years. Numerous studies confirm that, over time, the vast majority of [actively managed mutual funds](#) have failed to outperform comparable cap-weighted indexes, after accounting for fees, expenses and transaction costs.¹ The question we posed more than a decade ago, and which many investors are asking today, is this: Despite great strengths compared to active managers, are cap-weighted indexes optimal from an investment perspective? Or can alternatively weighted indexes serve passive investors better than index funds based on traditional benchmarks?

WisdomTree U.S. Dividend-weighted Index Returns, 2006–2016

So what was observed in real time since the WisdomTree Indexes began to be calculated and disseminated on May 31, 2006? Eleven of WisdomTree's 12 dividend-weighted Indexes beat their comparable broad based cap-weighted index over the past 10 years in the U.S. and in the developed world. When measured against the value segments of the benchmarks, the comparisons tilt even more overwhelmingly in favor of WisdomTree's dividend-weighted Indexes. All 12 of the WisdomTree dividend-weighted Indexes beat their [value](#) benchmarks. This is important, as a dividend-weighted approach is most often classified in the value style when peer group comparisons and when [regression analysis](#) is conducted to examine what factor exposures are represented in the returns. In this blog post, we will examine the returns of the U.S.-based indexes. The figure below displays results for WisdomTree's U.S. dividend-weighted Indexes over the most recent one-year, three-year, five-year and ten-year periods against traditional indexes.

Average Annual Returns, WisdomTree U.S. Dividend-weighted Indexes, (5/31/2006–5/31/2016)

Index	WT Index Inception	Average Annual Total Returns as of 5/31/2016			
		1 year	3 years	5 years	10 years
WisdomTree Dividend Index	6/1/2006	3.62%	10.55%	11.86%	7.45%
Russell 3000 Value Index		-0.28%	8.98%	10.44%	6.03%
Russell 3000 Index		0.22%	10.57%	11.15%	7.39%
WisdomTree LargeCap Dividend Index	6/1/2006	3.06%	10.24%	11.71%	7.14%
Russell 1000 Value Index		-0.06%	9.23%	10.70%	6.11%
S&P 500 Index		1.72%	11.06%	11.67%	7.41%
WisdomTree High Dividend Index	6/1/2006	9.05%	11.28%	12.90%	6.74%
Russell 1000 Value Index		-0.06%	9.23%	10.70%	6.11%
WisdomTree MidCap Dividend Index	6/1/2006	6.96%	13.18%	13.03%	8.92%
Russell Midcap Value Index		-0.31%	10.22%	10.92%	7.76%
S&P MidCap 400 Index		-0.42%	9.69%	10.00%	8.51%
WisdomTree SmallCap Dividend Index	6/1/2006	2.36%	9.37%	11.08%	7.00%
Russell 2000 Value Index		-2.75%	6.10%	7.55%	5.25%
Russell 2000 Index		-5.97%	6.93%	7.86%	6.27%

Sources: WisdomTree, Zephyr StyleADVISOR, Bloomberg, as of 5/31/2016. Past performance is not indicative of future results. You cannot invest directly in an index. Index performance does not represent actual fund or portfolio performance. A fund or portfolio may differ significantly from the securities included in the index. Index performance assumes reinvestment of dividends but does not reflect any management fees, transaction costs or other expenses that would be incurred by a portfolio or fund, or brokerage commissions on transactions in fund shares. Such fees, expenses and commissions could reduce returns.

A couple of important takeaways:

- Four of the five wisdomTree U.S. dividend-weighted Indexes outperformed their comparable cap-weighted Index over the last 10 years. The sole exception occurred in the most efficient market—U.S. large caps—where the [WisdomTree LargeCap Dividend Index](#) lagged the [S&P 500 Index](#) by 27 [basis points \(bps\)](#) annualized over 10 years.
 - o But notably, the wisdomTree LargeCap Dividend Index outperformed the [Russell 1000 Value Index](#) by 103 bps annualized over 10 year
- All five wisdomTree Indexes outperformed their comparable cap-weighted value indexes over the last 10 years. In fact, all five wisdomTree Indexes generated higher annualized returns over the last one-year, three-year, five-year and ten-year time frames than did the value benchmarks in those categories.
- wisdomTree generated greater excess returns in the mid- and small-cap segments, traditionally viewed as the less efficient part of the U.S. stock market. Both the [wisdomTree MidCap Dividend Index](#) and the [wisdomTree SmallCap Dividend Index](#) outperformed the core and the value cuts of their cap-weighted peers over each of the periods displayed in the table.
- Not only did the wisdomTree MidCap Dividend Index beat the [S&P 400 MidCap Index](#), it beat the S&P 500 Index by 151 bps per year over the past decade.

Conclusion

WisdomTree’s Indexes were constructed to introduce a measure of valuation into index weights, so investors would not buy equity markets based solely on the prices paid by previous investors. Rather than weighting each component based on its market value, wisdomTree’s broad-based dividend Indexes typically include all investable stocks that pay dividends and then weight them annually based on a measure of relative value: the cash dividends each company pays as a percentage of the total amount of cash dividends paid by all the companies in that market. We call this weighting by the [Dividend Stream®](#). Real-time results, going back 10 years, suggest this may be a better way to own equity markets, both in the U.S. and in the developed world, compared to comparable indexes that set weights based on a company’s market value.

DEFINITIONS

Dividend weighted: Constituent securities represented within the Index in proportion to their contribution to the dividend stream of the Index.

Fundamentals: Attributes related to a company's actual operations and production as opposed to changes in share price.

Volatility: A measure of the dispersion of actual returns around a particular average level. nbsp;.

Passive: Indexes that take a rules-based approach with regular rebalancing schedules that are not changed due to market conditions.

Actively managed mutual funds: Investment strategies that are not designed to track the performance of an underlying index.

Value: Characterized by lower price levels relative to fundamentals, such as earnings or dividends. Prices are lower because investors are less certain of the performance of these fundamentals in the future. This term is also related to the Value Factor, which associates these stock characteristics with excess returns vs the market over time.

Regression analysis: statistical process for estimating the relationships among variables. It helps one understand how the typical value of the dependent variable (Y-variable) changes when any one of the independent variables is varied, while the other independent variables are held fixed.

S&P 500 Index: Market capitalization-weighted benchmark of 500 stocks selected by the Standard and Poor's Index Committee designed to represent the performance of the leading industries in the United States economy.

Basis point: 1/100th of 1 percent.

Russell 1000 Value Index: A measure of the large-cap value segment of the U.S. equity universe, selecting from the Russell 1000 Index.

S&P MidCap 400 Index: provides investors with a benchmark for mid-sized companies. The index covers over 7% of the U.S. equity market, and seeks to remain an accurate measure of mid-sized companies, reflecting the risk and return characteristics of the broader mid-cap universe on an on-going basis.
