
WHY BUYBACKS MATTER

Christopher Gannatti – Global Head of Research
04/17/2017

[Share buybacks](#) have become a major focus of conversation within the investment industry—most recently due to speculation that if the U.S. government were to institute some sort of “repatriation holiday,” profits currently being held overseas to avoid taxation would be utilized largely for share repurchases to thereby “goose” [earnings-per-share \(EPS\)](#) growth by reducing the number of [shares outstanding](#).

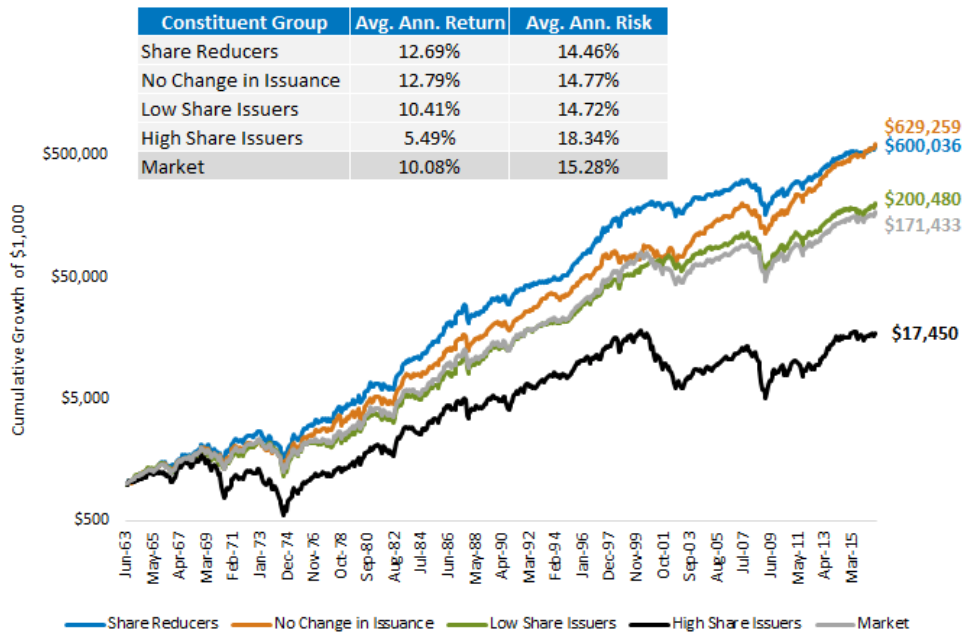

However, in a broader sense, do firms that implement share buyback programs actually lead to stronger returns?

The Importance of [Net Issuance](#)

When judging a firm’s share buyback behavior, it’s critical to think in terms of the net change in the number of shares outstanding, as opposed to any gross level of share buybacks. Firms issue shares to raise capital that they cannot otherwise access, as they wouldn’t want to give away ownership in future profits lightly. Therefore, we look at four distinct groups of stocks based on net share issuance behavior:¹

- **Share Reducers:** These are firms that were implementing more share buybacks than share issuance and therefore saw their number of shares outstanding decrease each year.
- **No Change in Issuance:** These are firms that might have been buying back shares and might have been issuing shares, but overall there was no change in the number of shares outstanding each year.
- **Low Share Issuers:** These are firms that ranked in the lowest 20% of share issuers—in other words, their shares outstanding did increase, but on the lower end of the spectrum.
- **High Share Issuers:** These are firms that ranked in the highest 20% of share issuers—in other words, these companies needed capital, and share issuance was a heavily utilized avenue by which to raise it.

**How Net Issuance Led to Differentiated Equity Returns in U.S. Equities
(Cumulative Growth of \$1,000 Based on Share Issuance Groupings)**

Sources: WisdomTree, Kenneth French Data Library. Past performance is not indicative of future results.

- **Share Reducers, No Change in Issuance and Low Share Issuers Outperformed the Market:** Not only did these three groups of stocks outperform the market, they did so with lower risk.
- **High Share Issuers Dramatically Underperformed:** The High Share Issuers underperformed to such an extent that it makes sense to think that avoiding these firms was one of the strongest contributors to relative outperformance of the other groups against the broad market.

At WisdomTree, Which U.S. Equity Index Had the Greatest Exposure to Share Reducers?

There are two reasons to ask this question today, in our opinion:

1. Share Reducers indicate a strong signal of quality, given that they have access to capital to such an extent that they can utilize a portion of it to actually reduce the number of shares that they have outstanding. This combines with how Share Reducers were shown earlier to have stronger long-term returns than the broad market.
2. Investors may currently be thinking about the potential of a repatriation holiday and could be seeking to position themselves in stocks that are already indicating a strong tendency toward buybacks.

Net [Buyback Ratio](#) + [Dividend Yield](#) = Total [Shareholder Yield](#)

For much of history, if U.S. corporations wanted to return profits to their shareholders, [dividends](#) were seen as the only option. It wasn't until 1982 that the Securities and Exchange Commission adopted Rule 10b-18, which gives corporations a "safe harbor" against charges of stock-market manipulation if buybacks are below a certain level relative to [average daily volume](#).² For those looking at historical [payout ratios](#), after that point it becomes important to consider both dividends and buybacks as opposed to solely looking at dividends.

In our view, total shareholder yield is the measure that currently best represents the return of capital to shareholders in U.S. equities.

WisdomTree’s U.S. Indexes Ranked by Total Shareholder Yield

Index Name	Net Buyback Ratio	Trailing 12M Dividend Yield	Shareholder Yield (Net Buyback Ratio + Dividend Yield)
WisdomTree U.S. Quality Dividend Growth Index	2.91%	2.32%	5.23%
WisdomTree LargeCap Dividend Index	2.09%	2.86%	4.95%
WisdomTree Earnings 500 Index	2.70%	2.10%	4.81%
WisdomTree Dividend ex-Financials Index	0.89%	3.79%	4.68%
WisdomTree Dividend Index	1.70%	2.95%	4.65%
WisdomTree Earnings Index	2.59%	2.04%	4.63%
WisdomTree High Dividend Index	0.93%	3.70%	4.62%
WisdomTree U.S. SmallCap Quality Dividend Growth Index	2.26%	2.30%	4.57%
WisdomTree LargeCap Value Index	2.41%	1.84%	4.25%
MSCI USA Index	2.01%	2.00%	4.01%
WisdomTree SmallCap Dividend Index	0.18%	3.60%	3.79%
WisdomTree SmallCap Earnings Index	2.18%	1.36%	3.54%
WisdomTree MidCap Dividend Index	0.28%	3.02%	3.30%
WisdomTree MidCap Earnings Index	1.56%	1.53%	3.10%
MSCI USA Small Cap Index	0.01%	1.50%	1.51%

For definitions of indexes in the chart, visit our [glossary](#).

- **[WisdomTree U.S. Quality Dividend Growth Index](#)**: With a net buyback ratio that is almost 50% higher than that of the MSCI USA Index, this Index had the highest total shareholder yield for any of WisdomTree’s U.S. equity Indexes.
- **[WisdomTree U.S. SmallCap Quality Dividend Growth Index](#)**: What might be even more interesting is how the WisdomTree U.S. SmallCap Quality Dividend Growth Index had a net buyback ratio of 2.26%—greater than that of the MSCI USA Index. This is impressive since share buybacks that actually reduce shares outstanding are largely a large-cap phenomenon. We believe it speaks to the alignment of WisdomTree’s Quality Dividend Growth methodology with characteristics that are common to companies that reduce their shares outstanding.

Does either of the WisdomTree U.S. Quality Dividend Growth Indexes shown above actually focus on buybacks directly as a component of Index methodology? In a word, no—buybacks are not a specified selection or weighting criterion. However, it’s clear that these methodologies have consistently provided exposure to share-reducing firms. Why? Firms that have high levels of profitability—[return on equity \(ROE\)](#) and [return on assets \(ROA\)](#)—are able to return cash to shareholders, whether through dividends or buybacks, and many choose to do so with buybacks.

While many firms are not responsible in their conduct of buybacks and buy at levels above their fair values, by and large we have found that buybacks have provided a return advantage over the market. This is one of the reasons we believe our Quality Dividend Growth Indexes—both for the U.S. large-cap and small-cap markets—are attractively positioned today.

DEFINITIONS

Share buybacks: Firms using cash to purchase their own outstanding shares; may positively impact the share price.

Earnings per share: Total earnings divided by the number of shares outstanding. Measured as a percentage change as of the annual Index screening date compared to the prior 12 months. Higher values indicate greater growth orientation.

Shares outstanding: all the shares of a corporation or financial asset that have been authorized, issued and purchased by investors.

Buyback ratio: The ratio of the amount of a company's buybacks to its market capitalization.

Dividend yield: A financial ratio that shows how much a company pays out in dividends each year relative to its share price.

Shareholder Yield: A data point that references the combination of dividend yield and buyback yield.

Dividend: A portion of corporate profits paid out to shareholders.

Average daily volume: Average dollar amount traded over the course of a single trading day.

Payout ratio: The percentage of earnings paid to shareholders in dividends. Calculated as yearly dividends per share over earnings per share.

Return on Equity (ROE): Measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Return on assets (ROA): Firm profits (after accounting for all expenses) divided by the firm's total assets. Higher numbers indicate greater profits relative to the level of assets utilized to generate them.
