

THE POWER OF DIVIDENDS

Tripp Zimmerman – Director, Research
06/22/2015

The [S&P 500 Index](#) recently closed at another record high and is up more than 250% on a total return basis since its March 9, 2009, bottom.¹ Although the S&P 500 Index has experienced strong gains, many [active managers](#) are still trying to play catch-up, with a majority of them underperforming the S&P 500 Index since the lows. One of the largest beneficiaries of active managers' underperformance has been exchange-traded funds (ETFs). ETFs that track broad [market capitalization](#) indexes like the S&P 500 Index have seen strong performance against active managers over the period, but they also offer numerous benefits—including diversification, generally low fees², tax efficiency and daily transparency of holdings. WisdomTree believes—and a growing body of evidence suggests—that ETFs incorporating a rules-based discipline to rebalance exposures to a [fundamental](#) metric of value can deliver additional value over ETFs that just track traditional market cap-weighted indexes. We also believe that fundamental or [smart beta](#) ETFs have the potential to outperform a majority of active managers. **Active Manager Comparison** The [WisdomTree Dividend ex-Financials Fund \(DTN\)](#) was able to outperform the majority of active managers in its peer group over all periods displayed below. We find it impressive that it was able to outperform more than 99% of its peer group over the five-year period and since it began tracking the [WisdomTree Dividend ex-Financials Index \(WTDXF\)](#)³. How did it do this? We believe it's by using a rules-based process to select and weight stocks.

Sources: WisdomTree, Morningstar, 6/16/06–3/31/15. WisdomTree Dividend ex-Financials Fund began tracking the WisdomTree Dividend ex-Financials Index after 5/7/09. Start date for the period was 6/1/09 because that was the start of the first full month the Fund began tracking its new Index.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance data for the most recent month-end is available at www.wisdomtree.com.

WisdomTree shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total returns are calculated using the daily 4:00 p.m. EST net asset value (NAV). Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns you would receive if you traded shares at other times. You cannot invest directly in an index.

Past performance, rankings and ratings are no guarantee of future results. The Percent of Peer Group Beaten is a fund's total-return percentile rank relative to all funds in the same Morningstar category and is subject to change each month. Regarding ranking of funds, 1 = best and 1,388 = worst, using the one-year time frame as an example where there were 1,388 managers with performance extending through the full period.

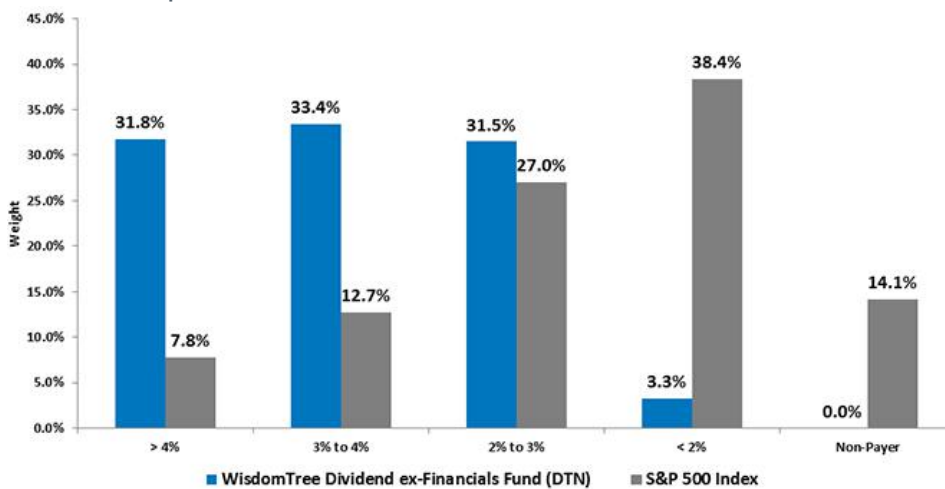

The Fundamental

Difference DTN seeks to provide broad exposure to the highest-[yielding](#) companies outside of the financial sector, while maintaining sensitivity to [valuation](#). To help achieve this, the underlying Index that the Fund tracks, WDXF, weights companies by their [indicated dividend yield](#), rather than their market cap, and rebalances back to dividend yields on an annual basis. WisdomTree’s rebalance process typically is driven by:

- [Dividend growth](#): Companies increasing dividends see their weight increased.
- Relative performance:

- Underperformers typically see their weight increased.
- Outperformers often see their weight decreased.

By following a rules-based Index that screens and weights companies by dividend yields, DTN can potentially raise a portfolio’s dividend yield and provide increased income to investors. DTN achieves this by tending to over-weight higher dividend-yielding stocks and under-weight the lower dividend-yielding stocks. This effect can be significant when comparing DTN against the S&P 500 Index, the most widely followed barometer for U.S. stocks, but has no dividend-focused selection criteria and weights by market cap instead of a fundamental metric. **Dividend Yield Ranges**

Conclusion

Investment managers and investors alike are always looking for better ways to invest. WisdomTree believes indexing is highly efficient and offers a number of benefits that make it a wise choice for investors. But history has shown us time and again that price is not always the best indicator of value, so WisdomTree feels a better approach might be to screen and weight securities by fundamentals. By focusing on dividend yields, DTN has proven itself for more than six years—outperforming 99% of active managers in its category since it began tracking WDXF.

DEFINITIONS

S&P 500 Index: Market capitalization-weighted benchmark of 500 stocks selected by the Standard and Poor's Index Committee designed to represent the performance of the leading industries in the United States economy.

Market Capitalization: Market cap = share prices x number of shares outstanding. Firms with the highest values receive the highest weights in approaches designed to weight firms by market cap.

Fundamental value: The value of a firm that is related to a company's actual operations and production as opposed to changes in share price.

Smart Beta: A term for rules-based investment strategies that don't use conventional market-cap weightings.

Yield: The income return on an investment. Refers to the interest or dividends received from a security that is typically expressed annually as a percentage of the market or face value.

Valuation: Refers to metrics that relate financial statistics for equities to their price levels to determine if certain attributes, such as earnings or dividends, are cheap or expensive.

Indicated Dividend Yield: Indicated dividends per share are annualized and then divided by the current share price. High values indicate low prices relative to indicated dividends.

Dividend growth: The growth in trailing 12-month dividends for the specified universe.
