

WisdomTree Model Portfolio Strategies

Investment Philosophy

WisdomTree model portfolios implement an index-centric approach, seeking to add value through both asset allocation and ETF selection relative to composite cap-weighted benchmarks. While the models are strategic in nature, they also reflect tactical tilts based on market conditions. By incorporating ETFs that provide representative exposure and rebalance back to measures of relative value, WisdomTree seeks to increase absolute and risk-adjusted returns compared to traditional approaches that predominantly use market-cap weighted funds.

Strategy Description

This strategy provides exposure to a diversified allocation of stocks and bonds using ETFs. The strategy seeks to balance growth of capital through domestic and international equity ETFs, and preservation of capital with fixed income ETFs that may serve as a source of income and potentially reduce volatility. The strategy may include both WisdomTree and non-WisdomTree ETFs within its equity component, while using PIMCO ETFs in its fixed income component. For performance purposes, this strategy will be benchmarked to a broad-based global equity index and a U.S. aggregate bond index.

Performance is historical and does not guarantee future results. Current performance may be lower or higher than quoted. Investment returns and principal value will fluctuate so that an investor's shares, when sold, may be worth more or less than their original cost. Performance information relating to the underlying funds can be found under the Fund Standardized Performance section.

Model Portfolio performance calculations are pre-tax, assume reinvestment of dividends and are based on Net Asset Value (NAV) data. **Gross performance** is net of underlying fund expenses but does not reflect the deduction of investment advisory fees (typically charged by a financial professional), brokerage or other commissions, or any other expenses that an investor would pay. **Net performance** reflects the deduction of a 0.00% annual investment advisory fee, which is the maximum anticipated advisory fee selected by your financial professional.

WisdomTree does not verify or endorse the selected advisory fee. Actual fees may vary. For fee schedules, contact your financial professional. Model portfolio investors are subject to the fees, expenses and risks of the underlying funds utilized in the model.

Model Portfolio performance results shown are theoretical and do not reflect any investor's actual experience. Thus, the performance shown does not reflect the impact that economic and market factors had or might have had on decision making if actual investor money had been managed and allocated per the Model Portfolio. Actual performance achieved in seeking to follow the Model Portfolio may differ from the theoretical performance shown for a number of reasons, including the timing of implementation of trades (including rebalancing trades to adjust to Model Portfolio changes), market conditions, fees and expenses (e.g., brokerage commissions, deduction of advisory or other fees or expenses charged by advisors or other third parties to investors, strategist fees and/or platform fees), contributions, withdrawals, account restrictions, tax consequences, and/or other factors, any or all of which may lower returns. For information about any of the underlying funds included in the Model Portfolio, including the fees, expenses and fund specific risks please review the fund prospectus.

* Conservative: a strategy that seeks to provide a smaller allocation to equities. Risks, including possible loss of principal, are still involved.

The illustration of the performance of funds included in the model portfolios shown above is historical and does not guarantee future results. Past performance does not guarantee future results. Current performance may be lower or higher than the performance quoted. Investment returns and principal value of an investment in funds included in the model portfolios will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Performance data current to the most recent month end for a fund included in the model portfolios may be obtained by visiting the fund's website, which is one of the following, depending on the fund: wisdomtree.com/investments for WisdomTree Funds; pimco.com for PIMCO funds

ETF shares are bought and sold at market price (not NAV) and are not individually redeemed. Brokerage commissions will reduce returns. Market returns are based upon the midpoint of the bid/ask spread at 4:00 p.m. eastern time (when NAV is normally determined for most ETFs), and do not represent the returns you would receive if you traded shares at other times. Performance shown may reflect fee waivers and/or expense reimbursements by the investment adviser to the fund for some or all of the periods shown. Performance would have been lower without such waivers.

WisdomTree Model Portfolio Strategies

The MSCI AC World Index is a free float adjusted market capitalization index that is designed to measure the performance of the world stock indexes covered by MSCI.

The Bloomberg U.S. Aggregate Bond Index measures the performance of the U.S. investment-grade bond market.

The MSCI ACWI Value Index captures large and mid cap securities exhibiting overall value style characteristics across 23 Developed Markets countries and 26 Emerging Markets (EM) countries. The value investment style characteristics for index construction are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield.

The data used is derived from FactSet and Bloomberg, and assumed to be correct and reliable, but it has not been independently verified; its accuracy or completeness is not guaranteed and no liability is assumed for any direct or consequential losses arising from its use. Unrestricted architecture, open-architecture, or unrestricted universe means that a model portfolio may include ETFs other than WisdomTree ETFs. However, the model portfolios are expected to include a substantial portion of WisdomTree ETFs.

Important Risk Information

There are risks involved with investing, including possible loss of principal. Using an asset allocation strategy does not assure a profit or protect against loss.

Foreign investing involves special risks, such as risk of loss from currency fluctuation or political or economic uncertainty. These risks are often heightened in emerging, offshore and/or frontier markets.

Funds focused on specific industries, sectors, markets or asset classes may be more vulnerable to any single economic or regulatory development. This may result in greater share price volatility.

Fixed income investments are subject to interest rate risk; their value will normally decline as interest rates rise. In addition, when interest rates fall, income may decline. Fixed income investments are also subject to credit risk, the risk that the issuer of a bond will fail to pay interest and principal in a timely manner or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline.

Derivative investments can be volatile; these investments may be less liquid than other securities, and more sensitive to the effects of varied economic conditions.

Due to the investment strategy of certain funds included in a model portfolio, such funds may make higher capital gain distributions than other funds. Actively managed ETFs, unlike typical ETFs, do not attempt to track or replicate an index. Thus, the ability of these ETFs to achieve their objectives will depend on the effectiveness of the portfolio manager.

Please see the prospectus of each fund included in a model portfolio for discussion of risks of investing in the fund.

Diversification does not eliminate the risk of experiencing investment losses.
